This is certify that

MUNDHIR HASSAN MOHAMED

Holder of **SDB 240299** and Passport No. **TAE: 423999** Has Successfully
Completed a training course for

HYDROGEN SULPHIDE SAFETY

This course covers the following topics

- Introduction, Hazards & Characteristics
- Method of Detection (Old & New) precaution location safety & protection
(a) Modern way to reduce concentration of H₂S on the drill floor
- Function of CMS, SCBA and various protective Equipments
- Contingency Plans
- Response, procedure, procedure form Marks, sign
- First Aid, Responsibility (Employers, workers)

Molecular Biology

Biomnis Middle East LLC

Test	Result	Reference Range	Methodology
COVID-19 by RT-PCR	Not Detected (Negative)	Not Detected	Multiplex Real Time PCR
**Specimen type: Nasopharyngeal Swab on Viral Transport Media			
**Test Methodology: In vitro diagnostic assay intended for Real-timePCR based detection of new SARS-CoV-2 RNA virus for confirmation of COVID-19 disease in patients with suspect viral infection. It is a real time PCR based technique based upon simultaneous examination of ORF1ab/RdRp and N-genes. The test is performed on real-time PCR detection system and NX-Viral RNA extraction kit to provide high-yield and quality RNA from clinical samples.			
**Results Interpretation: -Not Detected (Negative) : Not detected indicates that SARS-CoV-2 RNA is either not present in the specimen or is present at a concentration below the assay's lower limit of detection. This result may be influenced by the stage of the infection and the quality of the specimen collected for testing. Repeat test if deemed necessary after 72 hours -Detected (Positive) : Detected indicates that SARS-CoV-2 RNA is present in this specimen. Results should be interpreted in the context of all available laboratory and clinical findings. -Presumptive positive : Presumptive positive indicates that only one of multiple genes is detected. Low viral load possible. Please send a repeat sample after 72- 96 hours and correlate clinically.			
**Limitations: 1.As all diagnostic tests, a definitive clinical diagnosis should not be based on the result of a single test but should only be made after all clinical and laboratory findings have been evaluated. Collection of multiple specimens from the same patient may be necessary to detect the virus 2.A false negative result may occur if a specimen is improperly collected, transported or handled. False negative results may also occur if amplification inhibitors are present in the specimen or if inadequate numbers of organisms are present in the specimen. 3.If the virus mutates in the rRT-PCR target region, 2019-nCoV may not be detected or may be detected less predictably. Inhibitors or other types of interference may produce a false negative result. 4.This test cannot rule out diseases caused by other bacterial or viral pathogens.			
**Disclaimer: This assay has been validated and its performance characteristics have been determined by Eurofins Biomnis Middle East ; Molecular Biology Department
