Protection contre le paludisme

Le paludisme, est une maladie grave, parfois mortelle, qui sevit encore à l'état endémique dans un très grand nombre des pays tropicaux et subtropicaux. Vous devez vous protéger contre les piqures des moustiques (usage de moustiquaires imprégnées, répulsifs). En outre, les médicaments antipaludiques peuvent être utiles, soient pris régulièrement à titre préventif, soient tenus en réserve. Pour le traitement d'urgence d'une fièvre causée par les parasites, les médicaments sont variables et changeants, veuillez consulter votre médecin ou l'institution spécialisée la plus proche, ou encore la dernière édition de la brochure de l'OMS ainsi qu'avoir les certificats de vaccination exigés et conseils d'hygiène pour les voyages internationaux.

Si vous prenez des médicaments antipaludiques à titre préventif, il est nécessaire de les prendre de façon absolument régulière, de préférence pendant ou immédiatement après un repas plutôt par intermittence, et de continuer pendant les six semaines suivantes.

Aucune méthode ne peut garantir une protection complète. Si une fièvre se déclare entre une semaine après la première exposition et jusqu'à deux ans après votre guérison, ne manquez pas de consulter votre médecin et de l'informer de votre séjour dans une région inpaludée.
