## **ADDITIONAL SUMMARY & COMMENT**

I always prioritize safety consciousness first in, before and after executing a task and I enjoy the passion of my skill with energy of excitement in chasing task before the task knocks at my door.

And any challenge that seems to persist and discourage people is where I smile with energy of excitement in taking advantage and opportunity to develop a diagnosis code to win over the next task ahead and to come; Thus rendering my mindset that there is nothing like a major or difficult task and a challenge, if you are always ready for a challenge.

I love asking questions and seek for suggestions and ideas to know more when assisting on any task above or within my core and assigned duty, and also love to apply simple trigonometry ratios and rules, ratio and proportion, circle theorem and other trade calculations to achieve a good result when solving fabricating problems

Once again I stand and pledge for the adage; accidents just don't happen, but they are caused. And in all; Safety First. Thank you.
